

GitHub Guide (Using VS Code)

Step 1: Sign in to GitHub in VS Code

1. Open VS Code
2. Click on the Accounts icon (bottom left)
3. Select 'Sign in with GitHub'
4. Follow login steps in browser'

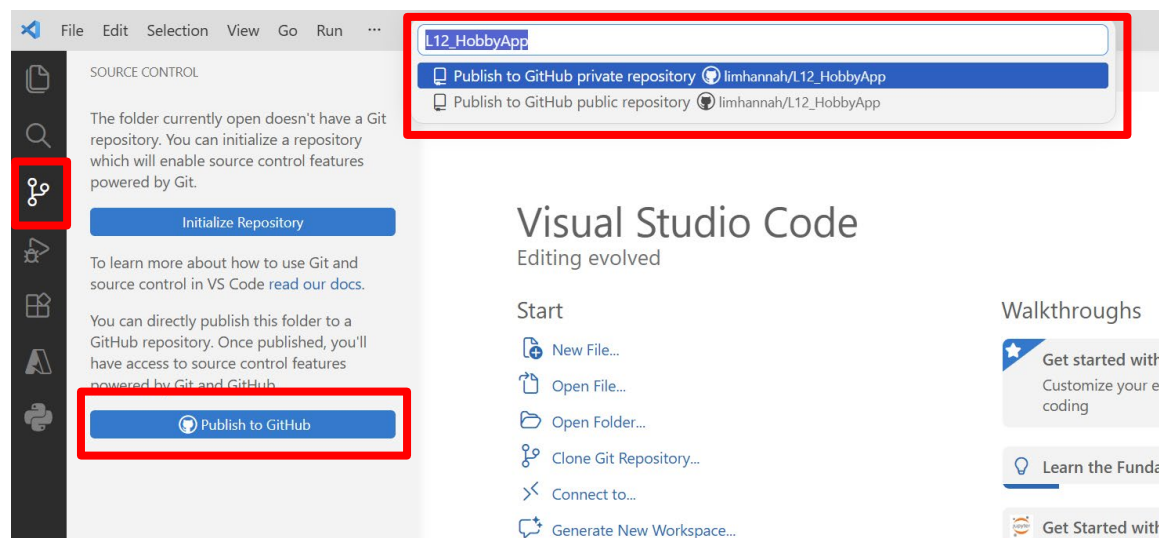

Step 2: Open Your Project

5. Go to File → Open Folder
6. Select your project folder

Step 3: Publish Project to GitHub (First Time)

7. Click Source Control icon
8. Click 'Publish to GitHub'
9. Enter repository name
10. Choose Public or Private

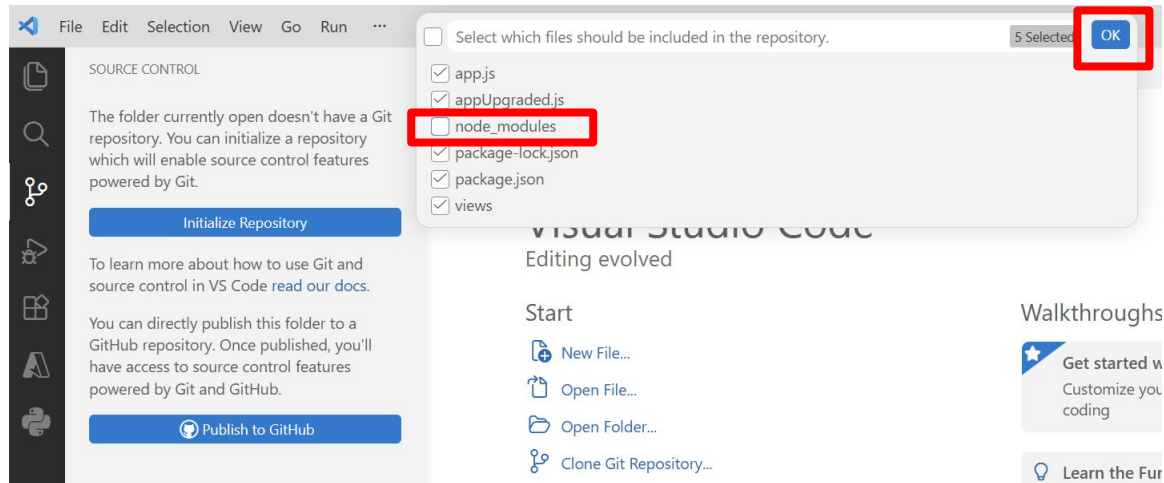

C237 Software Application Development

11. Uncheck **node_modules**

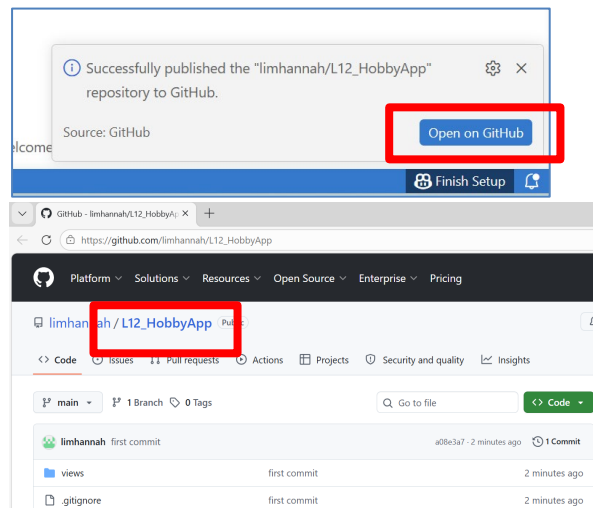

- **node_modules** can contain thousands of files, making your upload very heavy and slow.
- All the dependencies are already listed in your package.json. Anyone can just run: **npm install** to regenerate the entire node_modules folder.

12. Click Ok

- **Another way to ignore node modules:**
(You only need to **choose one method** - either uncheck node_modules when uploading **OR** add it to your .gitignore. **No need to do both.**)
 - add **node_modules** into your **.gitignore** file so it is automatically excluded from uploads.
 - How to add it to **.gitignore**:
 - Create a file named **.gitignore** in your project root (if you don't already have one).
 - Open the file and add this line: **node_modules/**
 - Save the file and commit it to your repository.
 - This ensures node_modules will not be uploaded to GitHub.

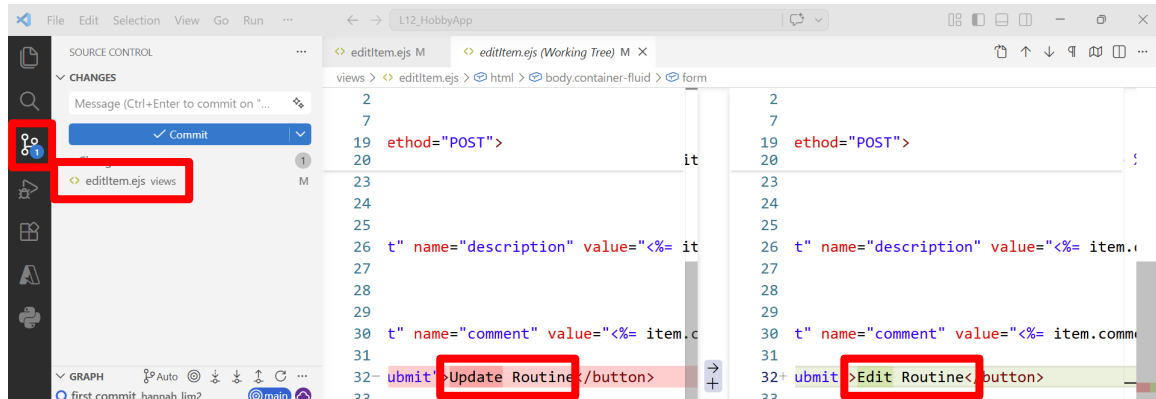

13. Click Open on GitHub – you should see it published on Github

Step 4: Understanding Changes

14. Edit files in your project
15. Check Source Control panel for modified files
16. Click files to view changes

Step 5: Commit Changes

17. Enter commit message
18. Click Commit and yes to stage all changes

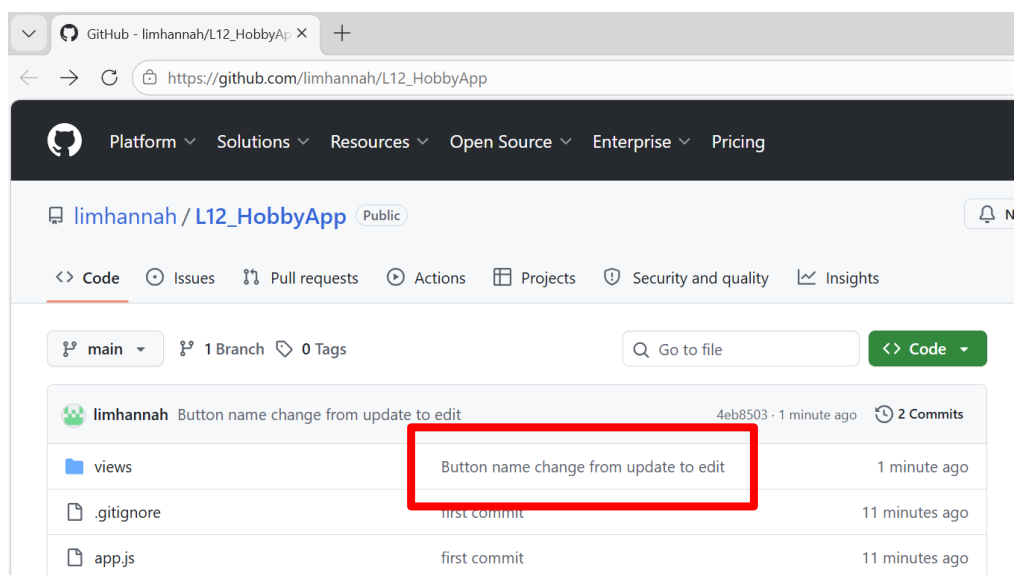

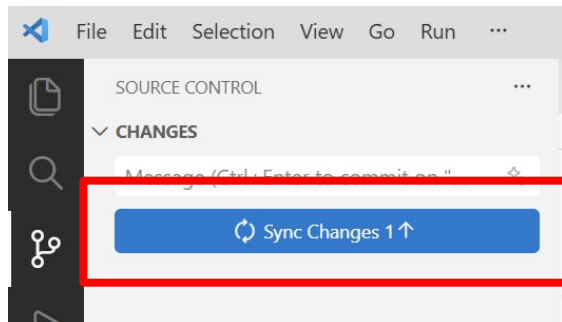

C237 Software Application Development

Step 6: Push to GitHub

19. Click 'Sync Changes' or 'Push'

20. Verify changes on GitHub

Step 7: Repeat Workflow (if necessary)

21. Make changes

22. Stage

23. Commit

24. Push

Important Rules

- Commit small changes
- Write clear commit messages
- Push regularly
- Do not overwrite others' work (team work)
- Do not copy entire project

C237 Software Application Development

Tips

- Commit after each feature
- Example: 'Created add form'
- Example: 'Handled POST request'
- Example: 'Display list page'
